THE FUTURE OF TIME

INTRODUCING THE SANDFOX SMARTWATCH

Loaded with artificial intelligence (AI), two cameras, a hard drive and a phone, the Sandfox is much more than the smartest smartwatch. It's a digital assistant and multimedia center on your wrist.

Launching at CES 2017, in Las Vegas, NV, the Sandfox Smartwatch is the brainchild of Mikevision Technologies, a high tech design company with offices in Geneva Switzerland, New York, and Shenzhen, China. Led by Swiss designers and engineers from the EPFL (Swiss Federal Institute of Technology) and coding experts from the gaming industry, the company's mission is to create new products that contain edge technology and are elegant in their design.

ECOSYSTEM – MUCH MORE THAN A SMARTWATCH WITH A PHONE

Android OS – The Sandfox is powered by a full Android system, which means that you can do everything provided by a full Android phone.

Phone – You don't need a phone to call, because the Sandfox has a built-in sim card slot. Just type your number on the dial keyboard, and make your call.

Cameras – The front-facing camera is for Skype and Facebook Live video calls. The rear facing camera is for high-resolution still photography.

SOS Button – A button you will hopefully never have to use, it can be activated in an emergency to automatically call three pre-programmed phone numbers, including police, fire, and relatives. Because it's also loaded with GPS, emergency personnel will know your exact location within your house in a health-related emergency.

Radio Network – You can listen to your favorite radio stations though the 3G network or standard FM stations.

Storage – 16 GB hard drive, where you can store Word documents, PowerPoint presentations and even videos.

Bluetooth – The Sandfox comes with a powerful Bluetooth speaker to enjoy all your audio content in perfect quality. Also included are Bluetooth earphones, which act as a microphone for Skype and Facebook Live video calls using the front-facing camera.

Faces of Sandfox – The Sandfox Smartwatch comes with 10 alternate faces or "skins". Select a skin that matches your mood or personal style.

THE FUTURE OF TIME

ARTIFICIAL INTELLIGENCE (AI) – A WATCH THAT LEARNS TO BECOME MORE HUMAN

THE SANDFOX IS YOUR VERY SMART PERSONAL ASSISTANT

Her name is Silvia, an acronym for “Self Instructional and Linguistically Variable Intelligent Algorithms”, the digital brain that runs Sandfox programs, listens to your commands, and keeps the watch ticking. Because Silvia is infused with artificial intelligence, and is, in fact, a learning computer program, the Sandfox is the smartest smart watch.

While Apple's Siri program was the first digital assistant to have a voice and lend a hand to help us manage our digital tasks, she never learned from her interactions with humans. Sylvia, by contrast, with her AI brainpower, learns from every voice-command how to become more efficient in her tasks and how to become more “human”.

With the AI-powered Silvia getting smarter every time we surf the web, click on an app, or snap a selfie, the Sandfox will be regarded less often as an intelligent timepiece and more as a digital assistant we rely on every day.

THE FUTURE OF TIME

TECHNICAL SPECIFICATION

OPERATING SYSTEM :	FULL ANDROID OS
DIMENSIONS :	49MM X 15MM
DISPLAY SIZE :	1.39 INCH
SCREEN RESOLUTION :	400 X 400 PIX
SCREEN :	AMOLED
INPUT :	TOUCH SCREEN
	MICROPHONE-SPEAKER
CASING :	TITANIUM – GORILLA GLASS
BATTERY :	600 MAH
GPS :	SUPPORTED
CAMERA :	DUAL CAM 5 & .3 MP + led flash
MICRO :	YES
SIM CARD :	MICRO SIM
BLUETOOTH :	SUPPORTED
WIFI :	SUPPORTED
MEMORY :	1GB RAM / 16GB FLASH
VIBRATOR :	SUPPORTED
GYROSCOPE :	SUPPORTED
G-SENSOR :	SUPPORTED
E-COMPASS :	SUPPORTED
SOS BUTTON :	SUPPORTED
RADIO :	SUPPORTED
NETWORK :	3G / built-in wifi / Bluetooth
